Summary

I am a Frontend Engineer passionate about web development and design. I enjoy helping users have meaningful interactions with technology at mission-driven companies or companies with creative focuses. I am a hands on learner that likes to experiment with new technology by creating functional applications. In my free time I enjoy gaming and drawing. My current favorite games are 7 days to Die, Hearthstone, and Overwatch 2.

Employment

imgix

Frontend Engineer

San Francisco, CA

Mar. 2019 to Nov. 2022

- Collaborated with a Design Team to completely redesign the marketing site from the ground up with **Nunjucks** and **SASS** while working closely with designers
- Refactored **gulp** tooling to a shared repository and moved any duplicate components cutting development time by 66%
- Developed drag and drop functionality while guiding users through a form to specify image attributes(built with Angular). Implemented an upload manager page that displayed the status of each upload
- Converted Angular components to React components using Typescript and Tailwind CSS to modernize the stack

Brigade

Software Engineer - Web

San Francisco, CA

June 2018 to Jan. 2019

- Create new features using React, Relay, and GraphQL
- Write unit tests for new components with Jasmine and Jest
- Participate in A/B testing of new features
- Refactored the file structure of the current web repository to be more readable

JP Morgan Chase

Technology Analyst Intern

San Francisco, CA

June 2017 to Aug. 2017

- Integrated accessibility automation framework(aXe) into the current test system
- Tested accessibility according to company and WCAG guidelines using VoiceOver and JAWs
- Worked on bug fixes within the Chase.com Profile team
- Created new Web-based Triage Tool for internal use

Datto Inc.

Software Engineering Intern

Norwalk, CT

May 2016 to Aug. 2016

- Implemented web interfaces using HTML, CSS, and JavaScript
- Coded high-volume software using primarily PHP
- Created new backend MySQL repository used by development team
